

Project Synopsis

Title: Enable MFA for IAM User and Federated User Using Authenticator App

Project Domain : Cloud Computing / Amazon Web Services (AWS)

Project Type : Academic Project

Sr.no.	TEAM MEMBER	ROLL NUMBER
1.	OJAS SARASWAT	2415001068
2.	PALAK BINDAL	2415001078
3.	SHIVAM BRITHARIYA	2415001495
4.	SAFAL PANDEY	2415001356

- **Step 1:** The dashboard shows **Recently visited services** like IAM, S3, EC2, CloudFront, Billing, VPC, DynamoDB, CloudWatch, and Lambda for quick access.
- **Step 2:** The **Welcome to AWS section** provides links for getting started, training & certification, and AWS Builder Center.
- **Step 3:** The **AWS Health widget** displays system health details — open issues (0), scheduled changes (1), and notifications (0).
- **Step 4:** The **Cost and usage section** shows billing and usage information for the current month.

Step 1: The search bar at the top is used with the keyword “iam” to quickly find related AWS services.

Step 2: Under **Services**, results show IAM (manages access), IAM Identity Center (workforce access), and Resource Access Manager (share resources).

Step 3: Under **Features**, options like IAM Access Analyzer for S3, Groups, and Projects are displayed to manage permissions and organize users.

Step 4: On the right side, the **AWS Health widget** shows system health details — open issues (0), scheduled changes (1), and notifications (0).

Step 5: The console is set to the **Asia Pacific (Mumbai)** region, with the account name visible, showing where resources are managed.

Step 1: The **Security recommendations** section advises enabling MFA for the root user and deactivating/deleting root access keys to improve account security.

Step 2: The **IAM resources** section shows counts of groups (2), users (3), roles (9), policies (0), and identity providers (0).

Step 3: The **AWS Account** section displays the account ID, option to create an alias, and the IAM sign-in URL for users.

Step 4: The **Quick Links** section provides shortcuts to manage security credentials and MFA settings.

Step 5: The **Tools** section highlights the Policy Simulator for testing and evaluating IAM policies.

Step 6: The **What's new** section lists updates such as higher quotas for roles, trust policies, and identity providers.

Step 1: The **IAM users** section lists three users — AdminUser, DeveloperUser, and MFATestUser.

Step 2: Each user entry shows details like path, group, last activity, MFA status, password age, and console sign-in.

Step 3: The **AdminUser** and **DeveloperUser** accounts have a password age of 31 days, while **MFATestUser** has a password age of 5 days and last activity 5 days ago.

Step 4: The **MFA** column shows “Virtual” for MFATestUser, meaning multi-factor authentication is enabled for that account.

Step 5: The left sidebar provides navigation options such as Dashboard, Roles, Policies, IAM users, IAM groups, Identity providers, Account settings, Root access, and Temporary delegation requests.

Step 6: The top banner highlights AWS Identity Center, suggesting streamlined human access to AWS and cloud apps.

Step 1: The **User Summary** shows ARN, creation date, console access (enabled with MFA), and last sign-in details.

Step 2: It indicates the user has one **access key**, with an option to create a new one.

Step 3: The **Permissions** tab lists two attached policies — AmazonEC2FullAccess and AmazonS3ReadOnlyAccess.

Step 4: Options are available to simulate, remove, or add permissions for this user.

Step 5: The left sidebar provides navigation for roles, policies, user groups, account settings, and reports.

Step 1: The **Console sign-in** section shows the sign-in URL, password update date (5 days ago), and last console sign-in (5 days ago).

Step 2: The **Multi-factor authentication (MFA)** section indicates a virtual MFA device is assigned, with options to remove, resync, or assign a new device.

Step 3: The **Access keys** section explains programmatic access to AWS services, showing no active keys but an option to create one.

Step 1: The page shows the **IAM user sign-in form** with fields for Account ID/Alias, IAM username, and Password.

Step 2: Options like “Remember this account,” “Show Password,” and links for “Having trouble?” or “Sign in using root user email” are provided.

Step 3: A yellow **Sign in button** is displayed to access the AWS console.

Step 4: A notice at the top mentions upcoming updates to the AWS sign-in experience starting mid-2026.

Step 1: The **Recently visited** section shows no services yet, but suggests commonly used ones like EC2, S3, CloudWatch, and IAM.

Step 2: The **Welcome to AWS** section provides links for getting started, training & certification, and AWS Builder Center.

Step 3: The **AWS Health** section states “No health data” and indicates the user does not have permission to access AWS Health.

Step 4: The **Cost and usage** section includes placeholders for current month and cost breakdown, though no data is shown.

Step 5: The **Solutions** section highlights 13 vetted AWS solutions for business and technical use cases.

Step 6: The top navigation bar shows options for search, notifications, settings, region selection (Europe – Stockholm), and account details (MFA test user).

Step 1: The search shows **IAM Identity Center**, which manages workforce access to multiple AWS accounts and cloud applications.

Step 2: It also lists **IAM**, used to manage access to AWS resources securely.

Step 3: Another service shown is **AWS Entity Resolution**, which uses machine learning for entity resolution tasks.

Step 4: Under **Features**, options include Identity providers, IAM Access Analyzer for S3, and Groups.

Step 5: On the right side, there are quick actions like managing console access, assigning MFA devices, and creating access keys.

Step 1: Dashboard shows IAM Identity Center for managing user access and permissions.

Step 2: Sidebar includes Users, Groups, Settings, Multi-account permissions, and Application assignments.

Step 3: Central management explains SCPs and monitoring member accounts.

Step 4: Warning box notes member accounts can enable apps independently.

Step 5: Settings summary shows instance name, identity source, region, org ID, and issuer URL

Step 1: The **Users** list shows one user named *FederatedUser* with display name *Ojas Saraswat*.

Step 2: The user status is **Enabled** (green check mark).

Step 3: The account has **one MFA device** attached for security.

Step 4: The user was **created manually**.

Step 5: Sidebar includes options like Dashboard, Users, Groups, Settings, Multi-account permissions, and Application assignments.

Step 1: A yellow banner shows the email is not verified, reminding that verification is needed for features like email-based two-step sign-in.

Step 2: Buttons allow actions such as reset password, delete user, or send verification link.

Step 3: General information shows User ID, status (Enabled), created time, and last updated details.

Step 4: Tabs include Profile, Groups, AWS accounts, Applications, MFA devices, and Active sessions.

Step 5: Sidebar navigation offers Dashboard, Users, Groups, Settings, Multi-account permissions, and Application assignments.

Step 1: A yellow warning shows **email not verified**, required for features like two-step sign-in.

Step 2: Action buttons include reset password, delete user, send verification link, and disable user access.

Step 3: General info shows User ID, status (Enabled), created/updated date, and manual creation.

Step 4: Tabs include Profile, Groups, AWS accounts, Applications, MFA devices, and Active sessions.

Step 5: The **MFA devices** tab shows one registered authenticator app created on August 24, 2026.

Step 1: The login box shows the AWS logo and a field with username “FederatedUser.”

Step 2: A **Next button** is provided to continue sign-in.

Step 3: A note below mentions agreement to AWS terms, privacy notice, and cookie usage.

Step 4: Background design features geometric cube patterns in blue and purple tones.

Step 1: The login box shows username “FederatedUser (not you?)” with a password field.

Step 2: Options include “Show password” and “Forgot password?”.

Step 3: A yellow **Sign in button** is displayed.

Step 4: Checkbox option “This is a trusted device” with a learn more link.

Step 5: Background has cube-style graphics representing cloud infrastructure.

Step 1: The **Accounts tab** is selected, showing “AWS accounts (0)” with no linked accounts.

Step 2: A search bar allows filtering by name, ID, or email.

Step 3: Columns for Account Name, Account ID, and Email are displayed but empty.

Step 4: A **Create shortcut button** is available on the right.
